Education

Technical Specialist living in Barcelona, with a diverse background in analytics and experience in technical/business problem solving. Able to apply different methods and an always growing knowledge base to solve any problem. Looking for an opportunity to continue growing in the tech industry!

Red Points / Technical Specialist

January 2020 - Present, Barcelona, Spain

- Technical Problem Solving using many different skill sets.
- Development of strategies and proposals for improving the quality of the platform and increasing automation, accounting for customer and business needs.
- Automation and Scripting (Python, App Engine, FaunaDB).
- Deployment and creation of POCs for small projects, such as dashboards to display/handle data (Flask, Django)
- General Data Analysis (Pandas, NumPy, Matplotlib, Requests/Urllib3)
- Able to function in a fast paced environment, where often quick decisions and solutions are necessary.

Red Points / Research Analyst

May 2019 - January 2020, Barcelona, Spain

- Actively implementing technology and strategies on 35+ clients to detect all possible infringements online, and in the process protecting the client's brands/products.
 - Extensive understanding of client's needs and the enforceability of their IP rights, developing creative solutions to automate this process.
 - Providing monthly reports to the CSMs about detection quality and contributing to upsells, through analysis of counterfeiter behaviour.
-

University of York / Bsc (Hons) Bioarchaeology (2:1)

September 2015 - July 2018, York, UK

- Developed ability to construct and communicate complex critical arguments relating to different periods of history and prehistory, surveying sites and their assemblages.
- Developed a range of practical, analytical techniques for effective data collection and processing, these were required for qualitative/quantitative reports.
- Gained a deep understanding of complex scientific techniques for analysis of biomolecular data (such as aDNA and Isotope analysis)
- Use of a number of statistical methods/data science in the final dissertation to understand and visualise bioarchaeological data.
